

Hewlett-Packard Support of VMware on Non HP Servers

As a result of virtualization encapsulation and hardware independence, the support of VMware virtual machines can be delivered by Hewlett-Packard technical services to customers running any number of third party vendor platforms* with the same level of service excellence as delivered on HP servers.

Customers who have purchased non HP platforms and VMware bundles or those planning to move HP's OEM VMware software from an HP platform to a non HP platform can continue to receive the same level of support for their VMware products through HP services.

With best in class service and many years of multi-vendor environment support, Hewlett-Packard service offers the best choice for support of customer investments in VMware across the entire platform infrastructure. As one of the largest VMware OEMs, Hewlett-Packard has built and maintained a close relationship with VMware which allows Hewlett-Packard to deliver service leadership to customers who have invested in VMware for their total business solutions.

If you have any additional questions please do not hesitate to contact your local account representative.

Corporate Product Service Manager for VMware
Hewlett-Packard Company

**All platforms need to meet the current VMware Hardware Compatibility List (HCL) and be running a currently supported version of ESX. In the event that a problem is determined to be diagnosed as associated with a platform specific issue, the customer will be advised to contact the appropriate hardware vendor for support.
